

Thank you for requesting information on VisionUSA products. As a manufacturer and decorator of proprietary, plastic drinkware, we are diligent in providing only safe and compliant promotional products for your clients' use.

- All VisionUSA products are safe, compliant and meet FDA standards.
- None of our products are made of Polycarbonate and therefore do NOT contain Bisphenol-A (BPA).
- The recycling designation for our products is #7. This #7 category is simply a catch-all for all "other" types of plastics.
- Most of our products are made from SAN (Styrene Acrylonitrile), which is an accepted and widely used, safe consumer goods material. The balance of our products are made from Polypropylene (category #5) or stainless steel.
- All of our printing inks and materials are lead free.
- All VisionUSA materials and inks are California Prop 65 compliant.
- Material and data safety sheets are available upon request.

Over the past twenty years we have been proactive in ensuring the safety of our products. All VisionUSA items are made from the finest virgin materials. We have always, and will continue to produce only high-quality, long-lasting, safe and useful promotional products.

Thank you,

VisionUSA
